

SOURABH MURUKATE

UI/UX Designer | Product Designer | SaaS & Dashboard Design

Pune, Maharashtra, India | +91 90759 90882 | sourabhmurukate2560@gmail.com | [Behance Portfolio](#)

SUMMARY

User-centered UI/UX Designer with 1.5+ years of experience designing SaaS dashboards, enterprise automation platforms, and real-time monitoring systems for technical and B2B audiences. Skilled in translating complex, multi-step workflows into intuitive interfaces through wireframing, user-flow mapping, interactive prototyping, and scalable design systems. Strong design-thinking and problem-solving foundation, with a track record of partnering closely with developers, QA, and product teams to ship high-fidelity Figma designs that reduce engineering rework and improve everyday usability.

CORE SKILLS

Design & UX: User-Centered Design, Design Thinking, Wireframing, User Flows, Information Architecture, Interaction Design, Dashboard Design, Design Systems, Interactive Prototyping, High-Fidelity UI Design, Usability Testing, Responsive Design

Design Tools: Figma, FigJam, Miro, Adobe Photoshop, Figma AI

AI-Assisted Design: ChatGPT, Claude, Lovable, Uizard

Technical & Collaboration: HTML, CSS, Design-to-Developer Handoff, Cross-Functional Collaboration, Product Documentation, QA & Deployment Support

EXPERIENCE

Aarkay Data Analytics LLP — Pune, Maharashtra

Jan 2025 – Present

UI/UX Designer

Test Automation Platform

- Designed the end-to-end UX workflow for a test automation software platform, translating multi-step engineering test sequences into a clear, navigable interface for test engineers.
- Designed the UI for automated machine load testing across a 0–150% load range, enabling engineers to configure and run multi-stage test cycles without manual oversight.
- Replaced a third-party calibration tool with an in-platform calibration interface, consolidating the testing workflow into a single, cohesive system.
- Built real-time dashboards surfacing device status, live test progress, and generated reports, giving engineers immediate visibility into test health.
- Architected a Test Management module that let engineers save and reuse device configurations, eliminating repetitive setup for recurring tests.
- Reduced onboarding friction and user error by introducing clear navigation, contextual error handling, and progress indicators across the platform.
- Delivered 25+ high-fidelity Figma screens with detailed specs and component annotations, shortening developer clarification cycles during handoff.
- Collaborated daily with developers and the testing team, iterating on flows based on technical constraints and real-world testing feedback.

Network Monitoring System (NMS)

- Designed real-time monitoring dashboards giving operations teams immediate visibility into device health and network performance.
- Created interfaces for alarms, network topology visualization, and device management to speed up issue identification across distributed sites.
- Designed core modules — Site Management, Switch Monitoring, License Management, and User Access Control — supporting end-to-end network administration.
- Streamlined multi-site monitoring workflows by improving navigation and information hierarchy, reducing the steps needed to reach critical alerts.
- Partnered with developers and product stakeholders on feature planning, technical documentation, and iterative UI refinement.
- Extended design work beyond the core product, creating client-facing brochures and supporting documentation for sales and onboarding.

PROJECTS

Smart Vehicle Parking Application — Mobile App

- Designed end-to-end mobile UX for a smart parking app, mapping the complete journey from parking discovery through slot booking and payment.
- Created user flows and wireframes to define a streamlined discovery-to-booking journey, then validated it with high-fidelity interactive prototypes in Figma.
- Focused design decisions on cutting parking search time and reducing friction during high-demand booking periods.

Virtual Event Management Application — Mobile App

- Designed an end-to-end virtual event discovery and booking platform for concerts, music events, and online experiences, covering home, listing, detail, and booking screens.
- Architected user flows for event search and ticket booking, including advanced filtering by date, time, category, and music genre, plus relevance-, newest-, and time-based sorting.
- Reduced the number of steps required to book a ticket by streamlining the discovery-to-checkout journey and applying user-centered design principles throughout.
- Built wireframes, high-fidelity mockups, and interactive prototypes in Figma to validate flows ahead of development handoff.

Responsive Landing Page Design — Web

- Designed 2–3 responsive, conversion-focused landing pages, balancing visual hierarchy, typography, and CTA placement to drive user action.
- Built scalable, on-brand layout systems in Figma adaptable across breakpoints and devices.

EDUCATION

B.Tech, Information Technology — Dr. J. J. Magdum College of Engineering
Maharashtra, India

2018 – 2022

LANGUAGES

English, Hindi, Marathi
